Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 1-5 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The claims are generally narrative and indefinite, failing to conform with current U.S. practice. They appear to be a literal translation into English from a foreign document. Where a claim sets forth a plurality of elements or steps, each element or step of the claim should be separated by a line indentation (See MPEP 608.01(i)(i)). The claims are replete with limitations having insufficient antecedent basis for the limitations, furthermore it is not clear whether applicant intends the claims to encompass the combination of the trunnion assembly and the gun or the trunnion assembly for use with the gun in that applicant initially claims the assembly for use with the gun then later recites elements of the gun such as the "impetus caused by rearward movement of the gun". Appropriate correction is required.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1, 4 and 5 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Dabrasky (US Patent # 1,742,436). Dabrasky discloses a trunnion assembly for a gun

comprising a trunnion shaft (reference 7) a housing defining a bore for rotatably and concentrically receiving the trunnion shaft, a bearing assembly located inside the housing and surrounding the trunnion shaft, The bearing assembly includes a re-aligning means for re-aligning a longitudinal axes of the shaft and the bore after movement out of alignment (page 1, lines 43-56). The bearing assembly includes a toroidal-type roller bearing assembly. Dabrasky further discloses a gun provided with such a trunnion assembly.

5. Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipate by Gotman (US Patent # 4,699,528). Gottman discloses a trunnion assembly comprising a trunnion shaft (reference 5) a housing defining a bore (reference 11) for rotatably and concentrically receiving the trunnion shaft, a bearing assembly located inside the housing and surrounding the trunnion shaft, The bearing assembly includes a re-aligning means for re-aligning a longitudinal axes of the shaft and the bore after movement out of alignment (abstract). The re-alignment means is in the form of a ball bearing assembly located inside the bore of the housing and surrounding the trunnion shaft, wherein the ball-bearing assembly includes a central ball bearing (reference 25) and two resiliently compressible O-rings (reference 35 & 40) disposed on opposite sides of the ball bearing, a cam ring (reference 20, 30) disposed between each O-ring and the ball bearing, each cam ring having a cam surface (reference 23, 33) that has the ability of abutting an outer surface of the ball-bearing. The O-rings are each located in an O-ring retainer (surfaces at 17 and 45).

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
